AN OPERATING PLATFORM FOR THE BUSINESS OF BIKES

Run the business behind the bikes.

PedalFish is working software for running service work from intake through payment. It fits around how your shop operates — and the tools you already use.

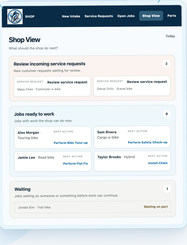

See PedalFish in action

Talk about your shop

Built for independent bike shops.

See what needs attention

Keep work moving

Being great at fixing bikes shouldn't require being great at every operational task it takes to run a bike shop.

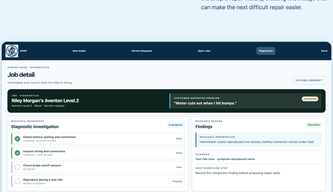

BUILT TO UNDERSTAND THE SHOP

Not another chatbot.

The intelligence in PedalFish comes from the work already moving through your shop — what customers report, what mechanics find, what gets approved, what gets stuck, which parts are needed, what work gets done and what actually fixes the bike.

Over time, that history can make the next job smarter: surface a repair you've seen before, suggest a useful diagnostic check, catch a job that's falling behind, identify a recurring blocker, or show you where the shop is losing time.

> **The goal isn't AI you have to manage. It's a shop that gets smarter as you use it.**

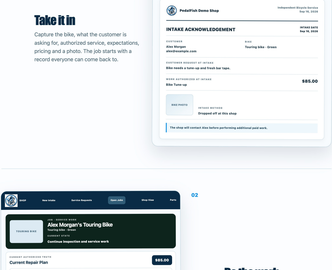

COMING SOON · DIAGNOSTICS

From a shifting problem to an intermittent motor fault.

PedalFish Diagnostics is being built for the bikes independent shops actually work on — traditional bikes and e-bikes. Give mechanics a structured place to investigate symptoms, record findings, work through diagnostic steps and capture evidence as the problem becomes understood.

And every completed diagnosis becomes part of the shop's repair history, creating knowledge that can make the next difficult repair easier.

IT STARTS WITH SERVICE

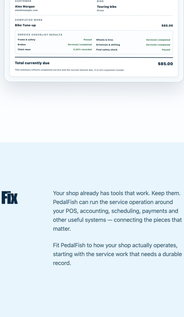

Build intelligence on top of the work that's actually happening.

Service is the first deep PedalFish workflow because it creates a durable operational record from the moment a bike comes in until it goes home.

01

Take it in

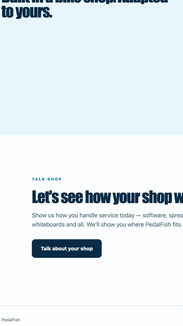

Capture the bike, what the customer is asking for, authorized service, expectations, pricing and a photo. The job starts with a record everyone can come back to.

02

Do the work

Keep authorized service, mechanic work, checklists, blockers and the changing reality of the repair together as the job moves forward.

03

Close the loop

Finish with a durable record of what was actually done, the service results and what the customer needs to know when the bike goes home.

SERVICE OPERATIONS

Keep the tools that work. Fix the parts that don't.

Your shop already has tools that work. Keep them. PedalFish can run the service operation around your POS, accounting, scheduling, payments and other useful systems — connecting the pieces that matter.

Fit PedalFish to how your shop actually operates, starting with the service work that needs a durable record.

BUILT IN A BIKE SHOP

Built in a bike shop. Adapted to yours.

PedalFish is built from actual bicycle-shop work by mechanics and owner-operators. Shops get hands-on setup around how they take in, move and finish service work — fitting PedalFish to the way they operate without turning the product into bespoke software for every shop.

Service is the foundation, not the boundary. The same operational understanding can extend into customer communication, parts and procurement, shop coordination and the decisions an owner has to make every day.

TALK SHOP

Let's see how your shop works.

Show us how you handle service today — software, spreadsheets, paper, whiteboards and all. We'll show you where PedalFish fits.
